

BID PROPOSALS FOR NEW FLOOR

Paul Abt Flooring

Belleville, IL:

Taraflex Sport M Plus (7MM) with volleyball and basketball striping **\$45,830.00** *

Option – Taraflex Isolsport membrane \$14,810.00 (only necessary if there is a problem with moisture coming up thru the floor)

Paul Abt Flooring

Belleville, IL:

Mats Inc. Wood Flex flooring (6.7 MM) with volleyball and basketball striping **\$37, 290.00** *

JBC & Associates

St. Louis, MO:

Mats Inc. Woodflex flooring (6.7 MM) with volleyball and basketball striping **\$30,572.00** *

Please note – I am good friends with John Baggy, owner of JBC & Associates. John not only is selling us the floor at cost, he has also convinced his manufacture to sell the floor at a reduced price. Both John and Mats Inc. passed on a very good price providing Bartelso School would be a reference for JBC & Associates.

Mike Kuhl from Interiors in Main in Breese will do the install. He too gave us a great price knowing that Bartelso could be a reference for his company.

John has sold very little Woodflex floor in the area and this is why he and his manufacture got very aggressive in pricing their Woodflex product to Bartelso School.

Zieren Furniture company

Carlyle, IL:

Tile floor over existing floor **\$13,850.00** (May have to remove old floor)

Tile floor + removing old floor approximately **\$23,850.00** (Floor may have asbestos)

*In order to assure the Taraflex and Woodflex floor can be glued to the existing gym floor, the wax will need to be stripped and a test mat glued to the floor and then test the pull-up resistance.

BENEFITS OF A NEW TARAFLEX OR WOODFLEX MULTIPURPOSE FLOOR

1. Enhance the looks of the gym. The new floor looks like wood but yet it is an all purpose floor.
2. After a new floor is installed, we will have all new striping therefore we can widen the gym floor thus allowing a wider 3 point shooting range. We also can lengthen the gym. A bigger floor to play on for Bartelso gives us a better advantage
3. The floor is rated to be a safe floor. We all know how hard our floor is.
4. The floor will be much better for everyone to stand, walk and run on due to the cushion. We all know what concrete floors do to our bodies and joints. This floor will be much more comfortable for social events, recess, P.E. ball games and practice etc.
5. The floor has good traction.
6. There is acoustics built into the cushioned floor. This would give the gym better sound quality for band concerts, in house sound system, social events, crowded games, etc.
7. Low maintenance cost – The floor never has to be waxed (our current floor is stripped and waxed every year)
8. The floor is heat welded together therefore spills will not penetrate thru to adhesive area.
9. If sections get tore or damaged, new pieces can be heat welded in place.
10. Floor has the correct % of bounce to it and yet still has plenty of cushion.
11. Vinyl composition tile has 75 – 125 PSI and this floor has 200 PSI
